## **What is a Printers' Exchange?**

A group of enthusiastic printers agree to send a number of printed items and money for postage to a co-ordinator, who then collates the submissions into bundles and mails one back to each of the contributors. Paul Moxon of Mobile, Alabama with the facilitation of the [Vandercookpress Info](#) website he manages was the driving force behind the Vandercook Centenary Print Bundle. Paul Moxon (MFA, MLIS) is a studio letterpress printer and an authority on the history and maintenance of Vandercook presses. He teaches workshops at book arts centres and universities throughout the United States, and publishes limited edition books and broadsides under the imprint Fameorshame Press.

## **Vandercook Proof Presses**

These are high-precision cylinder presses designed to iron out problems in the printing of text or illustrations prior to printing these on high-speed presses. They were therefore not meant as mass-production machines. After many decades it occurred to printing enthusiasts that these would be ideal for printing as a hobby. Once letterpress printing gave way to offset-lithography these machines became available cheaply to amateurs. While lacking the heraldic glamour of the Albion and Columbian platen presses previously used by amateurs, the Vandercook proof or test presses are far more precise and yield excellent results. These points are eloquently made in Items 23 and 80. Indeed, so clever is the design and so smooth the operation of Vandercook presses that owners become besotted with the machines.

## **The Participants**

In 2007 Paul Moxon did a census of owners of Vandercook proof presses. Then in 2008 he invited them to submit 110 prints, 8½ by 11 inches, together with \$40 for postage. The theme was to be 100 years of Vandercook proof presses, 1909 to 2009. The exchange would be limited to 100, and each contributor would get back 100 different prints. In the event ten printers failed to meet the deadline. Paul Moxon himself submitted two delightful prints, one under his own name and the other with fictitious details. The bundle accordingly comprises 91 prints.

3 contributions came from outside the English-speaking world (2 from Israel and one from Holland)

3 each came from England, Canada and South Africa

1 each from New Zealand and Scotland

77 from the USA (13 of these from California)

## **Paper**

With one exception the contributors did not skimp on the quality of stock. Sixty printers named the paper used, the products of 33 paper mills in all.

Mohawk (9 submissions)

French (7)

Arches, Crane, Rives, Magnani, Hahnemuhle (3 each)

Wausau, Somerset, Canson, Strathmore (2 each)

The other 21 brands were used once.

## **The Models Used**

The most popular is the SP15 (320 kg, 705 lb), probably because of its relative smallness and lightness. Ordinary human beings are able to transport it, and it can fit into a shed or outbuilding. In contrast last year machine movers and riggers charged R4500 to transport a Universal III (1066 kg, 2350 lbs) across Johannesburg.

### **The Seductiveness of Relief Printing**

Text and image printed from a raised surface display a deep, bright colour. Further, the printed sheets have a tactile, three-dimensional quality. This is because a relatively thick layer of ink has been pressed into the paper.

Offset-lithography appears grey by comparison, and the printed sheets are two-dimensional. The explanation is that with this method a relatively thin layer of ink is lightly deposited on the paper by a rubber blanket.

For this reason South African master printer Mark Attwood acquired an SP33 to print the text in his limited edition fine press books. He prints the illustrations by means of direct lithography. Text printed offset-litho appears too weak beside the vibrant lithographs.

Furthermore, once the equipment has been acquired, printing can be done cheaply.

### **Acknowledgements**

The organisers are grateful to the University of the Witwatersrand for making the space and facilities of the William Cullen Library available for this display. The assistance of Cathy Dryden in identifying the numerous elusive colours deployed by the printers is also gratefully acknowledged.

## C A T A L O G U E O F P R I N T S

NOTE. The items are all the same size, 8½ by 11 inches (216 by 280 mm), and were all printed in 2009. All but a few are broadsides on a single sheet. The required minimum edition was 110, but some are greater. Where submissions have titles these have been used in the description. Where there is no title a descriptive title has been supplied. Contributors were all asked by the co-ordinator, Paul Moxon, to provide the following details: press model, serial number, name of proprietor, name of the press, location (city, state or province, country), a description of materials, e.g. paper-stock, type (metal or wood), plate material, etc. Not all printers complied, and where details are missing from the catalogue it may be because they were not provided. The arrangement is principally alphabetical by surname of printer. As many contributors took great pains to mix colours, and as colour printing takes so much time the compilers have honoured them by trying to capture the varieties of colour. The two type cases on display belong to the University. The other items all belong to the organisers, Mark Sandham and Kalle Pihlajasaari.

### **1. MCMIX – MMIX**

The dates are given in Arabic and Hebrew numerals as well, and the gear teeth and cylinder are ingeniously depicted by means of strings of a tooth-like Hebrew character. Printed on an unusual press, a ‘Hunter Penrose Ltd – Little John, a British-built Vandercook No 4.’

**Ido Agassi.** Even Hoshen Private Press, Herut, Israel.

### **2. VANDERCOOK YEAR 100**

Typographic design printed in black, orange and two shades of pale grey-blue on a Vandercook No 4, a Universal I and a Universal III.

**100. FORME LOCKED UP IN CHASE (STEEL FRAME) FOR ITEM 63**

On the forme lies a wooden block with leather on top – this is a planer. The printer paces it on the type and hammers it lightly to push letters that are standing proud down to the height of the other letters.

**101. POLYMER PLATE FOR ITEM 75**

Light is shone through a photographic negative on to the polymer, soft at this stage. Where struck by the light the polymer hardens. The plate is then brushed and washed, leaving the image in relief.
